

Martin Tomečka

Backend Engineer · Platform & Domain Engineering

AI-AUGMENTED WORKFLOW

Bratislava, Slovakia · github.com/tommaone · [LinkedIn](#)

PROFILE

12 years of backend and platform engineering across insurance, tax, payments, and event-driven systems, delivering end-to-end features from design through CI/CD to production. Strong focus on legacy monolith modernization using the strangler pattern and incremental migration toward cloud-native architectures.

Since 2024, I've been working with an AI-augmented development workflow (Claude Code + MCP tooling), using structured domain context to navigate and safely modify large legacy systems. I also build internal tooling that exposes this context to LLMs to improve reliability in complex enterprise codebases.

Open to deeper work in platform engineering, distributed systems, and agent-assisted development.

EXPERIENCE

Backend Engineer · Platform & Domain Engineering

Mar 2021 – Sep 2026

Allianz Technology · Vienna, Austria

AI-Augmented Workflow & Tooling

- Integrated Claude Code + MCP into daily engineering workflow — custom knowledge bases and MCP servers that surface domain context (schema, adapter maps, business rules) from a 12-year-old legacy platform to the AI in real time
- Side project: LLM-powered DB2 console (Python, Node.js MCP server, multi-provider LLM, Kubernetes) — adopted by the team as a developer tool

Payment QR Code Service — Quarkus / Apache Camel

- Event-driven service for payment QR generation; full cloud onboarding (ECR, Vault, ArgoCD, Helm)
- Apigee Gateway integration, booking eligibility filter, B3 distributed tracing

Insurance Tax Calculation — Spring Boot

- Architecture-level refactor of calculation strategy layer; 13+ country rollouts; 70 PRs in 6 months
- ERT, coordinated tax, IPT API, MongoDB Mongock migrations, full API test suite

Assistance Provider Search — Spring Boot

- Search domain built end-to-end: region types, postal codes, distance filtering, provider distribution, ranking; 38 PRs over 18 months

AI / LLM

MCP Protocol Anthropic Claude
AWS Bedrock Azure OpenAI
GitHub Copilot
LLM App Architecture

PLATFORM

Kubernetes Helm ArgoCD
Terraform Docker Kafka
CI/CD Vault Apigee

BACKEND

Java Spring Boot Quarkus
Apache Camel OSGi
REST / SOAP DB2 MongoDB
PostgreSQL

SCRIPTING / TOOLING

Python Node.js JavaScript
Bash SQL

LEARNING NEXT

Frontend (Angular / TS)
Agentic Engineering

LANGUAGES

Slovak — native
Czech — native
English — professional

Claim Event Streaming — Kafka / Redpanda

- Greenfield streaming service: Kafka consumer, CloudEvents model, reusable integration test infrastructure; Java 21, Spring Boot 3.5

Core Insurance Platform

- Feature delivery across claim lifecycle, contract, rating engine, document services; 6+ concurrent release branches
- Fixed long-standing orphaned workflow lock issue — no prior fix existed in platform history

External Platform Consultant

Jan 2018 – Feb 2021

[Gratex Services a.s.](#) · Bratislava, Slovakia

External consultant for Allianz Worldwide Partners (AWP) via AMOS Austria GmbH. Fullstack development across business logic and UI for Allianz Global Assistance and Allianz Worldwide Care. REST/SOAP services, OSGi plugin development, SWT UI.

Fullstack Developer · External Platform Consultant

Jul 2013 – Dec 2017

[Gratex International, a.s.](#) · Bratislava, Slovakia

External consultant on multiple insurance and enterprise projects. Started as fullstack developer on insurance expert agent applications; expanded into backend REST/SOAP service development. Long-running engagement with Allianz Worldwide Partners (AWP) from 2015, plus projects for Allianz Russia, Allianz Elementar Versicherungs, and smaller enterprise clients.

EDUCATION

Master's Degree — Applied Informatics

2008 – 2013

[Constantine the Philosopher University](#) · Nitra, Slovakia

 **Rector's Award** — awarded at graduation for overall outstanding academic excellence

Thesis: Autonomous maze-solving robot using PID control and path memory optimization — implemented and benchmarked in Matlab, Lua, and Java.
